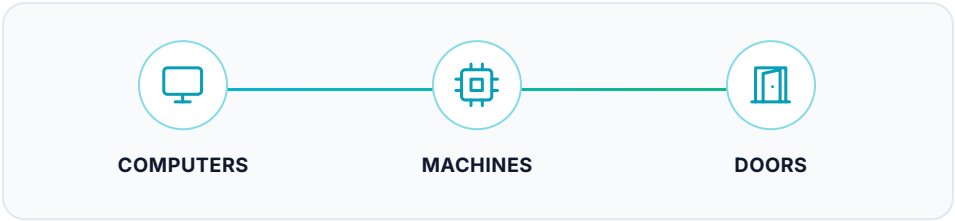
ChipLogin

COMPUTERS · MACHINES · DOORS

One card.
For computers, machines and doors.

Make everyday work easier and keep access under control. You decide who can access what. Employees simply tap their card.



Computer sign-in without typing passwords

Sign in to Windows 10 and 11 with your own card. Colleagues can share a computer without sharing passwords.

Machine access based on permissions

ChipLogin checks the employee's assigned permissions and sends the result to the machine control system.

Entry to authorised areas

Manage who can enter each area of your building or site.

We support MIFARE DESFire cards.

We will assess whether your existing DESFire cards and readers can be used.

ChipLogin

RULES · VISIBILITY · CONTROL

NIS2, GDPR or workplace safety? Start with who can access what.

Shared passwords, outdated permissions and hard-to-find access records make everyday management and audit preparation more difficult.

1. **Set permissions.**
   Decide who can access connected computers, machines and doors.
2. **Keep access up to date.**
   Update permissions when employees change roles or leave.
3. **Review access events.**
   Use recorded access events to support internal reviews.

Shared management on your network

Manage cards and access together with ChipLogin Server. Standalone computers can also operate without a shared server.

ChipLogin supports selected access control measures. Deployment alone does not ensure compliance with all legal obligations. It does not replace training or machine safety functions.

Let's discuss your needs.

We will recommend a suitable setup and prepare a quote.
